Context

CTRL+ALT+DEITY.EXE is an independent sci-fi short film that I wrote, directed and produced using Generative AI as a creative partner in every stage of the process. I created it alongside my work at HIKE to push myself beyond short social clips into a complete narrative film. The project was selected and showcased at the Artefact AI Film Festival as an example of end-to-end AI film production.

Goal

- Explore how far Generative AI can go as a creative partner for film – not just for single shots, but for story, pacing and mood.
- Tell a human story about grief, faith and machines: a grieving priest feeds the memory of his dead daughter into an AI god that promises to erase pain, until a forbidden cassette forces the system to remember.

My role

- Concept, writing and direction
- Prompt design for script, visuals and audio
- AI video & audio production and editing
- Final delivery and submission to the festival
- Write Recipe and Production Journal

AI tools & workflow

- Language models for concept exploration, outlines, script drafts and dialogue
- Text-to-image and text-to-video models for concept art, style frames and sequences
- AI voice and music tools for voiceover, sound design and score sketches
- Editing tools to assemble the final cut, refine pacing and add titles

Process

1. Concept & story outline

- developed the core idea and world with the help of LLM prompts.

2. Script & dialogue

- iterated scene by scene, using prompts for tone and emotional beats and editing the best options together.

3. Visual development

- explored looks for the chapel, characters and deity interface, then defined a small visual style guide.

4. Shot planning & generation

- broke the script into shots and wrote detailed prompts for framing, movement and atmosphere, then generated raw clips.

5. Voice, sound & music

- designed voices for the priest and AI god and generated music/ambience to follow the emotional arc.

6. Editing & finishing

- assembled everything into the final cut, refined pacing and sound, and prepared the film for festival playback.

Outcome

- Selected and showcased at the Artefact AI Film Festival.
- Developed a reusable workflow for AI-assisted film production that I now apply to other projects and workshops.

- Strengthened my practice of treating AI as a real creative collaborator, not just a tool.
