

Self-Portrait Avatar Experiments

Context

I use my own face as test material to explore identity, style and transitions in AI video tools (Higgsfield etc.). These are sketchbook-style pieces that feed into my workshops and visual storytelling work.

Why I do this

- Safe way to experiment with identity and emotion in AI images and video.
- Quick way to test new tools, styles and transitions.
- Material for talks and demos about AI image and video generation.

Selected experiments
